

## Units 14 The Statement of Cash Flows

### I. Introduction

- A. The statement of cash flows summarizes the effects of business activity on a company's cash balance.
- B. Analyzing cash flows leads to a better understanding of a company's financial position.
1. An understanding of the company's ability to pay debt and dividends is developed.
  2. Cash flow analysis helps determine the company's ability to have positive cash flows in the future.
  3. An understanding of a company's management capability is also enhanced.

### II. Three business activities provide the format for analyzing a company's cash flows.

| ACTIVITIES                  | CASH INFLOWS FROM  | CASH OUTFLOWS FOR  |
|-----------------------------|--|--|
| <b>Operating Activities</b> | Sales<br>Other Income<br>Current Asset Decreases                 | Operating Expenses<br>Interest Expense<br>Current Asset Increases<br>Taxes |
| <b>Investing Activities</b> | Long-Term Asset Sales<br>Sale of Investments<br>Loan Collections | Long-Term Asset Purchases<br>Purchase of Investments<br>Loan Repayments    |
| <b>Financing Activities</b> | Sale of Stock<br>Debt Issuance                                   | Treasury Stock Purchases<br>Debt Repayment<br>Dividend Payments            |

### III. Cash flows during Quick Corporation's first year of operation will be analyzed.

- A. Data is from pages 5, 7, and 27. Some items have been combined.
- B. Accounts receivables (net) equals accounts receivable minus allowance for bad debts.
- C. Fixed assets (net) equals fixed assets minus accumulated depreciation.

| Quick Company<br>Income Statement<br>For Period Ending December 31, 1997 |                          |
|--|--------------------------|
| Sales Revenue  | \$4,000,000              |
| Cost of Goods Sold   | <u>2,000,000</u>         |
| <b>Gross Profit</b>  | <b>\$2,000,000</b>       |
| Operating Expenses <sup>1</sup>  | <u>1,650,000</u>         |
| <b>Operating Income After Taxes</b>                                      | <b>\$ 350,000</b>        |
| Other Income   | <u>150,000</u>           |
| <b>Net Income</b>  | <b><u>\$ 500,000</u></b> |

<sup>1</sup> Depreciation expense was \$300,000.

| Quick Company<br>Balance Sheets<br>December 31, 1997 |                            |                            |
|--|----------------------------|----------------------------|
|  | 12/31/97                   | 12/31/96                   |
| <b>Assets</b>  |                            |                            |
| Cash   | \$ 1,100,000               | \$ 1,000,000               |
| Accounts Receivable (Net)                            | 1,000,000                  |                            |
| Prepaid Expenses                                     | 100,000                    |                            |
| Inventory  | 800,000                    |                            |
| Land   | 9,000,000                  | 9,000,000                  |
| Fixed Assets (Net)                                   | <u>5,700,000</u>           | <u>5,000,000</u>           |
| <b>Total Assets</b>                                  | <b><u>\$17,700,000</u></b> | <b><u>\$15,000,000</u></b> |
| <b>Liabilities and Equity</b>                        |                            |                            |
| Accounts Payable                                     | \$ 890,000                 |                            |
| Salaries Payable                                     | 10,000                     |                            |
| Notes Payable  | 8,500,000                  | \$ 7,000,000               |
| Stockholders' Equity 12/31/97                        | <u>8,300,000</u>           | <u>8,000,000</u>           |
| <b>Total Liabilities and Equity</b>                  | <b><u>\$17,700,000</u></b> | <b><u>\$15,000,000</u></b> |

#### IV. Cash Flows From Operating Activities

- A. Cash flow analysis begins with the assumption that net income represents an increase in cash.
- B. With accrual accounting, this assumption is probably incorrect. Adjustments, based on changes in balance sheet accounts, are used to trace the actual change in cash.
- C. Specifically, the effects of operating activities, investing activities, and financing activities on cash are measured.
  1. For example, if more credit sales are made than collected, accounts receivables increase and a negative adjustment is necessary.
  2. If inventories decrease, the outflow associated with merchandise for resale was less than cost of goods sold. As a result, a positive adjustment is needed.
  3. Similar adjustments are required based on other components of the balance sheet.

I wish the boss would send some cash flows my way because I need a new briefcase!

V. The logic of cash flows from investing activities and financing activities are explained using parts E, H, and I of the next section.

VI. Statement of cash flows using information from page 28 financial statements.

- A. **Net accounts receivable** increased. This means more sales were made than collected, subtract \$1,000,000.
- B. **Prepaid expenses** increased, subtract \$100,000.
- C. **Inventory increased**, which means more merchandise was purchased than went into cost of goods sold, subtract \$800,000.
- D. **Depreciation** is a noncash expense and did not represent a cash outflow, add \$300,000.
- E. **Net fixed assets** increased by \$700,000 and depreciation expense was \$300,000. This means fixed assets of \$1,000,000 were purchased, subtract \$1,000,000.
- F. **Accounts payable** increased. This means not all purchases were paid, add \$890,000.
- G. **Salaries payable** increased. This means not all wages were paid in cash, add \$10,000.
- H. **Notes payable** increased, add \$1,500,000.
- I. **Stockholders' equity** increased \$300,000. Assuming stock was not sold, and with income of \$500,000, a \$200,000 dividend was paid. Subtract \$200,000.
- J. Cash of \$100,000 was added to the beginning cash balance of \$1,000,000. The result was an ending cash balance of \$1,100,000.

| Quick Company<br>Statement of Cash Flows<br>December 31, 1997 |                     |
|---|---------------------|
| <b>Cash Flows From Operating Activities</b>                   |                     |
| Net Income  | \$ 500,000          |
| Accounts Receivable Increased                                 | (A) (\$1,000,000)   |
| Prepaid Expenses Increased                                    | (B) (100,000)       |
| Inventory Increased   | (C) (800,000)       |
| Depreciation, a Noncash Expense                               | (D) 300,000         |
| Accounts Payable Increased                                    | (F) 890,000         |
| Salaries Payable Increased                                    | (G) 10,000          |
|   | (700,000)           |
| <b>Cash Flows From Operating Activities</b>                   | <b>(\$ 200,000)</b> |
| <b>Cash Flows From Investing Activities</b>                   |                     |
| Fixed Assets Purchased  | (E) (\$1,000,000)   |
| <b>Cash Flows From Financing Activities</b>                   |                     |
| Notes Payable Increase  | (H) \$1,500,000     |
| Paid Dividend   | (I) (200,000)       |
| <b>Net Increase (Decrease)</b>                                | <b>\$ 100,000</b>   |
| Cash Beginning of Period                                      | 1,000,000           |
| <b>Cash End of Period</b>                                     | <b>\$1,100,000</b>  |

#### VII. Analysis

- A. Accounts receivable went up by \$1,000,000 and accounts payable went up by only \$890,000. While this is a new business, Lulu hopes this is not a trend.
- B. A negative cash flow from operating activities is difficult to finance for a long period.
- C. It looks like most of the \$1,500,000 increase in notes payable was used to finance fixed assets of \$1,000,000. Did the rest go into inventory, or was it used to finance a \$200,000 dividend? Creditors won't like loaning Quick money to finance dividends.
