X. Darin wants to compare assembly time of 30-milligram parts using method A and method B. It is not known whether these populations are approximately normal with the same variance. Use the Mann-Whitney test to determine at the .05 level of significance whether these samples come from populations with equal medians.

Time to Assemble 30-Milligram Parts in Seconds											
Method A	90	95	104	88	91	94	87	102	96	98	101
Method B	95	102	93	105	96	99	100	103	91	97	106
